

Swiggy Dashboard

USER BEHAVIOR ANALYSIS & INSIGHTS

PRESENTED BY : VAISHALI PUROHIT

Project Overview & Purpose

This project involves building a dynamic dashboard using Power BI for Swiggy, a food delivery platform. The dashboard aggregates and visualizes key data such as customer orders, restaurant ratings, delivery timelines, and regional performance.

Technologies Used:

- ➡ Microsoft Excel (Data Cleaning)
- ➡ Power BI (Dashboard Creation)

Purpose:

- ➡ Provide real-time insights into delivery metrics and customer preferences.
- ➡ Help the management team make data-driven decisions.
- ➡ Track performance of various restaurants and delivery executives.
- ➡ Identify high-demand regions and food categories.
- ➡ Monitor customer satisfaction through ratings and feedback.

Dashboard Overview

✦ This interactive Power BI dashboard analyzes Swiggy data to uncover trends in user behavior, restaurant performance, city-wise demand, and cuisine preferences.

✦ The goal is to provide actionable insights to improve customer satisfaction, delivery operations, and marketing strategies.

✦ This section displays overall sales performance, total orders, and key KPIs. It helps stakeholders understand the business at a glance.

User Behavior & Order Patterns

- ✦ This slide showcases some of the critical visuals and metrics displayed in the dashboard:
- ✦ High frequency of orders during weekends and dinner hours ,repeat customers contribute significantly to total sales.
- ✦ Cart abandonment rate is low among top cities ,preferences for digital payments over COD.
- ✦ Top performing restaurants ,most ordered items ,monthly order trends customer ratings overview.

City-wise Sales Performance

From the dashboard analysis, we derived the following insights:

- ★ Peak ordering times are during weekends and dinner hours.
- ★ Certain food categories like Biryani and Pizza are consistently high in demand.
- ★ Delivery delays are more frequent in high-traffic regions.
- ★ Restaurants with higher ratings see a greater volume of repeat customers.
- ★ Regional order patterns can help optimize delivery zones and promotions.

Restaurant & Cuisine Preferences

- ★ Top Performing Cuisines: North Indian, Chinese, and Biryani
- ★ High Rated Restaurants: Dominate in customer retention
- ★ Price Sensitivity: Customers prefer mid-range restaurants
- ★ Exclusive Listings: Perform better than non-exclusive ones

Conclusion

- ✦ The Swiggy dashboard enables stakeholders to understand user behavior, restaurant performance, and delivery patterns.
- ✦ This dashboard serves as a foundation for data-driven improvements in food delivery services.
- ✦ The dashboard helps uncover patterns that can guide operational, marketing, and customer experience strategies on Swiggy .
